

**Belgian  
Feed  
Association**

# Belgian situation

- Sustainability!
- Soy most important & used protein source
- Nutritional composition!
- (-) Overseas
- Help farmers in origine
- Not segregated → credits (like green energy certificates)

# Purchase of sustainable soy credits

100% domestic market covered

100% deforestation-free(\*)

collective purchasing

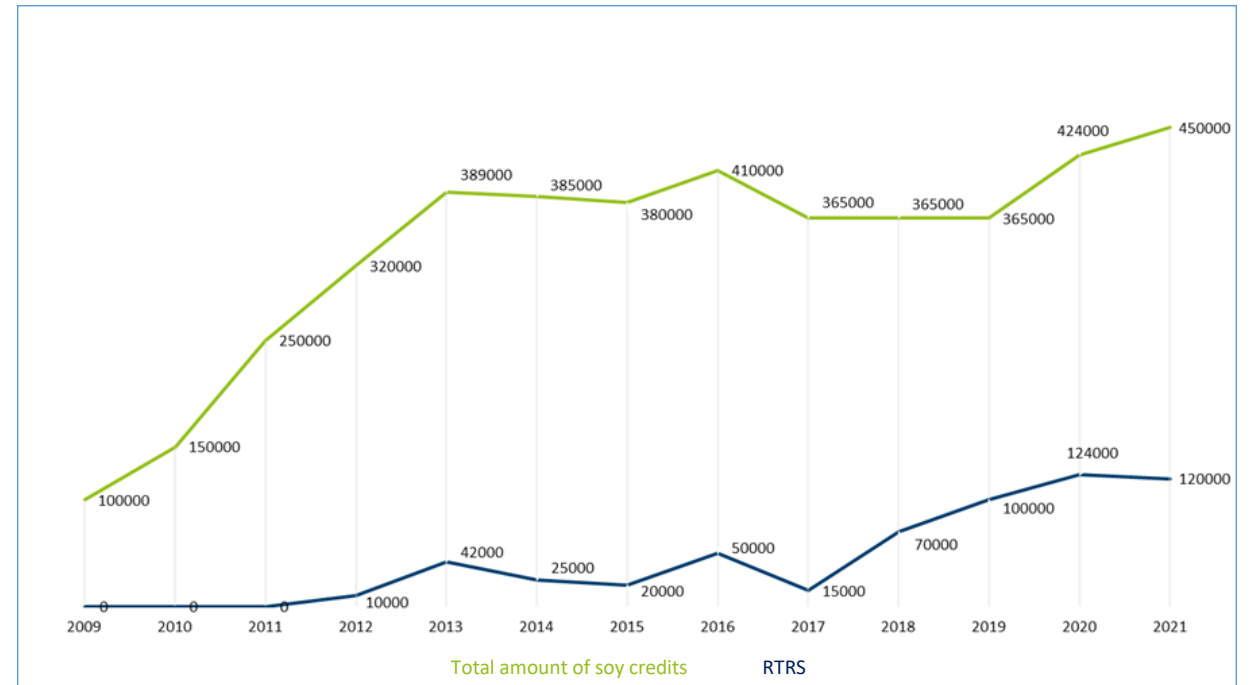

Participation is mandatory for all BFA members

Control by independent certification body

(\*) According to the study by the Dutch research group Profundo

2030: cover all the soy used by the Belgian feed producers

Amount of sustainable soy credits

Source: BFA

# Control by independent certification body

- Audit report: farmer + amount
- Platform: control mass balance

# Risk of legislative proposal

- other regions / countries → efforts

Really tackle deforestation

- Availability of soy will decrease

Soy is most important protein source

- Price will increase

No segregation → mass balance  
A principle known in Renewable Energy Directive

Workability!
